平台功能一览

■ 2021年10月数据库首页改版

为了在功能上让出版物和各项作者服务（如开放科学平台、在线会议平台等）更容易被发现和检索，ACS对数据库首页进行了全面改版；但是读者们最常使用的期刊主页没有做任何变动。

The screenshot displays the ACS Publications website homepage. At the top, there is a navigation bar with the ACS Publications logo, a search bar, and links for 'My Activity', 'Publications', and a menu icon. Below the navigation bar, there are four main categories: 'FOR ORGANIZATIONS', 'FOR AUTHORS', 'EVENTS & CONFERENCES', and 'OPEN SCIENCE'. The main content area features a large headline: 'Most Trusted. Most Cited. Most Read.' followed by a sub-headline: 'ACS Publications' commitment to publishing high-quality content continues to attract impactful research that addresses the world's most important challenges. A yellow 'Get Access' button is positioned below the sub-headline. To the right, there is a 'NEW & NOTEWORTHY' section with three items: 'ACS Wins Bronze Brandon Hall Group HCM Excellence Award', 'Learning to Create Effective Patents: A New ACS Guide Chapter', and 'ChemRxiv Surpasses 10,000 Preprints Posted'. Below this, there is a 'Browse Content' section with seven subject categories: 'All Subjects', 'Analytical', 'Applied', 'Biological', 'Materials Science & Engineering', 'Organic-Inorganic', and 'Physical'. At the bottom, there are four white buttons: 'Publish with ACS', 'New Products & Services', 'ACS Open Science', and 'Explore ACS Solutions'.

可按分析化学、应用化学、生物化学、材料科学和工程、有机和无机化学以及物理化学六大学科分类浏览出版物。

Large-Scale Chemical-Genetic Strategy Enables the Design of Antimicrobial Combination Chemotherapy in *Mycobacteria*

同一期内前后翻页

which is resistance to a compound... results in a combination whose resistance barrier is higher than two noninteracting compounds.

Previously, we reported a sequencing screening strategy, Primary Screening Chemistry and Targets (PROSPECT), which generated chemical genetic interaction profiles (CGIPs) that characterized the fitness of 150 multiplexed, genetically barcoded hypomorph mutants (strains depleted of individual essential gene products) of *Mtb* H37Rv in response to ~50 000 compounds (Figure 1A). (3) PROSPECT quantifies the fitness changes of genetically barcoded hypomorph strains on compound treatment; the vector of fitness changes, measured as log(fold-change) of the abundance of barcodes of a particular hypomorph after treatment with a compound of interest relative to a vehicle control, is known as a CGIP (Figure 1A). Addressing the need for MOA diversity in tackling antimicrobial resistance, PROSPECT can be used to prioritize compounds from primary phenotypic screening data based on their putative MOA, instead of simply their potency. We illustrated PROSPECT's strengths in the discovery of BRD-8000, an uncompetitive inhibitor of a novel target, EfpA (Rv2846c), an essential efflux pump in *Mtb*. Though BRD-8000 itself lacked potent activity against wild-type *Mtb* (minimal inhibitory concentration, MIC \geq 50 μ M), chemical optimization yielded BRD-8000.3, a narrow-spectrum, bactericidal antimycobacterial agent with good wild-type activity (*Mtb* MIC = 800 nM, Figure 1B) (3)

开放获取 (OA) 政策

■ ACS对全球开放科学呼声的回应

- 学术出版多年来一直在向开放获取迈进，ACS积极应对全球开放获取以及开放科学的呼声，2020年之前，ACS旗下有两本全OA的期刊。
- 2015年上线的ACS Central Science（投稿不收取费用），目标是提升化学作为“核心科学”的关注度，自创刊以来不断发表与其他学科交叉领域杰出的研究成果；
- 2016年上线的ACS Omega，旨在快速发表经过同行评议的研究成果，加快新理念和有潜力的研究的传播，从而推动化学科学的前沿。
